2. In what sense a software crash a good thing?

   ....

   ....

   ....

Score
/ 5

3. What value we get?

   True ***or*** *False* ***and*** *False* ***or*** *False*

Score
/ 5

4. Write a single line place of code to find the highest number from the following: 1, 24, 7, 8, 11, 23, 9, 3, 98

Score
/ 2

5. What should be the result of the following piece of code

```
y = 4
t = pov(y, 2)
print T
```

Score
/ 2

6. What will be the value of this expression mush show your working?

```
max(min(-8, -9), min(pov(2, 2), -7))
```

Score
/ 5

7. You can use the sqrt from the *math* module using two methods:

```
math.sqrt(36)
or
sqrt(36)
```

Your import statements for each of these method would look different. What would these two import statements be?

Score / 2

8. if we have code:

```
x = 'a'
y = x * 2
```

Type of y = ?

Score / 2

9. For the above question what code you write to find type of y?

Score / 5

10. What is the output of the following piece of code(not show your working)?

```
a = min
b = max
a(1, b(2, 4))
```
