

Introduction to computing

Iteration, Repetition, loops

Use word iteration instead of loops

(A good programmer is a lazy programmer.)

```
for ingredient in 'sugar', 'milk', 'tea leaves':  
    print "put", ingredient, "in"
```

```
for i in range(2, 10): → output
```

```
    print i
```

```
print "done"
```

2

4
5
6
7
8
9
done

while
loop

n = 0.13

while n < 1:

print n

n = n + 0.13

print n

print 'Done'

if you know
→ end goal you
use while loop
e.g all multiple of
0.13 from 0 to 1

counter

n = 0.13

i = 0

while n < 1:

~~print~~ i = i + 1;

print n

n = n + 0.13

→ if you know the
steps than you use
the for loop.

break

continue

print i

print "done"

2.4 iteration from guttag's
python book
